

Ird Rx Infrain2

```
loopa:  
infrain2  
sertxd ( "Ird data = ", #b13, 13, 10 )  
tune 0, 0, ( b13 )  
goto loopa
```

'Stop and read in a RIRC signal into infra (byte b13)
'Echo the infra (byte b13) to the F8 serial terminal
'Play a single note to 'beep the tune value of b13

- The Ird Rx demodulator needs a healthy low noise 4.5 volts to operate
- Refer to Help Section PICAXE Manual II under Infrain2 and Infraout for more details.
- NOTE: M2 chips use the better Irin command that allows any input pin to be used and a programmable mS timeout function. This allows the program to continue to loop
- Check other templates for project ideas: How to boost the range and how to make a simple 4 drawing pin remote control using the Infraout or M2 IROUT command. The Serin and Pulsin commands can demodulate ANY make or model of Ird remote for simple projects
- Remember: These commands are all compatible with Sony make TV remotes and TVs
